Post millennial New York provides a vivid tableau and a constant reminder of what has been and what could be. We live in this mutated place of great cultural past and uncertain future. All of us have been called on a fanatic voyage powered by the engine of a desperately beautiful creative exploration. We of fanatic voyage are passengers on the vehicle of our desire to explore and show our visions and dreams. Both observers and instigators, the artists are joined by a shared aesthetic of the moment and a collective reaction to the now. Our work creates a window to our downtown realities. We are artists with history brought together to inspire and support each other in a often hostile environment. Our objective is to travel the globe with our subterranean treasures.

"We are infinity SS. We are not a band and we don't do songs.
Time tells all tales, &the infinity ss is beyond time. Infinity SS does not exist.
Saint Stanton is the smelling salts of the information age.

Come all ye and be healed! HALLELUJAH!!!! Our corpse is not exsquisite.
Happy Science Happy Science Happy Science is the perpetual search for the meaning of
advancement of the human specie. We are a virus that infects your culture.

Our noise is an organ of suppression and release.
All hail St. Stanton and the twin goddesses from entropy and chaos."
